

Rainforests of Subtropical Australia (ROSA)

A Symposium of Science and Practice

Robina Community Centre & Auditorium, Gold Coast, 23-24 March 2017

It has been a decade since the last major rainforest conference in eastern Australia, and ROSA promises to bring the very latest in subtropical rainforest science and restoration practice to you in one exciting event!

Special guest speakers include some of Australia's leading rainforest experts such as Tim Low, Prof Roger Kitching AM, Prof Carla Catterall and Prof Ralf Buckley among many others. Thematic presentations will fall into 4 streams – rainforest restoration, values, threatened species and climate change.

In addition, ROSA will redefine the sometimes fraught relationship between fire and rainforest in a dynamic Q&A style discussion with 6 amazing panellists. And one of the conservation prophets of our time – Ian Lowe – will entertain you at the Symposium dinner.

Over 250 people are expected to attend this Symposium being held at the Robina Community Centre, so don't miss out as places are limited! ROSA is designed for anyone managing and conserving subtropical rainforest communities, and includes over 30 presenters that are leaders in their respective fields.

If you're passionate about or involved in the management and conservation of rainforest communities from a landholder, community group, government, or industry perspective make sure you don't miss ROSA 2017!
